Precipitation probability					
70%	30%	60%	70%	70%	80%

Forecast for Saturday 30 Dec 2023

Weather: An area of rain spreads east from early morning and is expected to take most of the day to clear east. Rain will be heavy and persistent at times but may become more showery in the morning with a few brighter spells however further rain following during the afternoon. Very wet conditions can be expected underfoot with rivers and watercourses filling quickly. Rain will be accompanied by southerly gales which will enhance the wind chill effect. Rain continuing through the evening.

Chance of cloud-free hill tops above 600m: 70% falling to 30%, due to rain spreading across the area.

Low cloud and visibility: Few or scattered layers of cloudy around 600m early in the day. Cloud will thicken and lower during the morning with broken layers above 400m, particularly in the west, perhaps higher and more scattered towards northern areas with some shelter. Visibility will be good initially in the morning but deteriorating as rain spreads in, becoming poor at times in heavier bursts of rain.
